JAKARTA, ...

Joko Adianto, M.InfSys

Supervisor

Ida Nurhaida, ST., MT

Undergrduate Thesis-writing Coordinator

Devi Fitrianah, SKom., MTI

Head of Information Technology Department

ACKNOWLEDGEMENT

I am grateful to have finished this undergraduate thesis entitled "Development of Map Application on Android Platform" in time. I have to admit that, this would be impossible without good supports and assistances. During on the process, I have received so much of it from people who were never giving up on me.

Thus in this opportunity I would like to express my sincere gratitude for them. Those people are as follows:

1. Mr. Joko Adianto, M.InfSys., whom I have been as lucky as one can be in having him as my supervisor.
2. Mrs. Devi Fitrianah, S.Kom., MTI., as the Head of Information Technology Department, who did not mind to share her experiences.
3. Mrs. Ida Nurhaida, ST., MT., as the Undergraduate Thesis-writing Coordinator.
4. Mr. Abdusy Syarif, Mr. Anis Cherid, Mr. Ari Sukmawibowo, Mr. Tri Daryanto and some of the lecturers in the Information Techology department.
5. My both parents whom I owe a special debt for encouraging and supporting me throughout.
6. Brothers, sisters and cousins who gave so much support and assistance during the process for this Undergratude Thesis.

7. Tony Hardie, Anggie Haryanto, Denni Maulana, Singgih Siswaji, Yuli, Abdul Kodir, Haisam, and some of the students in the year academy of 2007 in Mercu Buana University.
8. Some of the seniors especially Mr. Abdi Wahab, Mr. Enggar Oktobiyanto, Mr. Hendra Triatmaka, Mr. Tedy Setiawan and Mr. Budi Susanto.
9. My friends who work as assistants in computer lab especially Nukhran, Muhammad Choirudin, Ali Akbar Nata Saputra, Dwiki Jatikusumo and Yanuari Brilianto for sharing joy and their precious experiences.
10. And many other people whom I cannot mention each and everyone of them for the support they have contributing.

All the people mentioned above have helped to make this thesis what it is; for any shortcomings I alone am responsible. I realized this undergraduate thesis is still way too far from perfect. Thus support, assistance and suggestions for the development of this undergraduate thesis in future would be greatly appreciated.
