

ABSTRACT

This study aimed to test whether there is any effect off Job Experience, Job Autonomy, Role Requirements, Exercised Responsibility and Reward Achievement of Auditor's Job Performance in conducting the audit findings adjustment is done by distributing questionnaires. The study population is a Public Accounting Firm Affiliated Medium and Medium Non Public Accounting Affiliated. Data analysis was performed using multiple regressions. The results showed that Job Experience, Job Autonomy, Role Requirements, Exercised Responsibility and Reward Achievement affect the auditor's job performance in a sustainable manner. Furthermore, this study proves that the partial independence and objectivity while simultaneously all influence the quality of audit. For future research, this study suggests the development of survey coverage and the addition of more variables that affect the quality of audit.
