

ABSTRACT

Sign system design that is created is often still have shortcomings to be guiding other in the building or location and require other elements such as sign. Sign system has a very important role in the circulation and the human navigation in a site, particularly in establishing and maintaining human comfort and safety when doing activities in it. What should be considered when designing a system of marking, especially in public buildings will be full of activities such as tourist attractions? On this occasion, the author will try to explain the general process of designing the sign system for Waduk Gajah Mungkur attractions in Wonogiri. Design to be created must have its own characteristics so that the main attraction, but have the unique marking system must have the appropriate function, so as to help the visitors at attractions.
