ABSTRACT

In scientific research, the authors would like to know how to analyze the performance of a company using financial ratio analysis of the liquidity ratios, activity ratios, debt ratios and the ratio of profits. The ratio is commonly used to analyze financial statements and to be able to find out how a firm's performance.

In this paper the author uses descriptive research method that aims to make it systematic descriptive, factual and accurate information about how to measure the performance of PT. Graha Service Indonesia as seen from the financial ratios such as liquidity ratios, solvability ratios, activity ratios and profitability ratios.

The purpose of scientific writing is to analyze the level of liquidity, activity, debt and benefits each year as the company's performance evaluation. Based on the discussion, the authors conclude that the level of liquidity PT. Graha Service Indonesia in the liquid state in the year 2008 - 2011, although still below the average, to show the activity ratios that are less good results, the ratio of debt to the company should be able to control the use of debt and the cost to benefit ratio is still relatively very low in generating profits.

Key words: level of liquidity, financial statement
