

ABSTRACT

Together with the development of information and communication technology which increase faster, information systems have an important role for a company. The need of fast and accurate information in dealing with a company is very essential and one of the solutions is by using computer system. With computer we could make job more efficient and reduce work time.

PT Angkasa Pura II is still processing and recording debt-receivable manually so weaknesses like error in counting process, making files or report when they are needed timely and accurately in sudden is still found. Seeing these existing problems then one of the solutions is using computerized system in processing debt-receivable records in accounting field.

Key words : information system, data base, debt-receivable
