

ABSTRACT

This study aimed to get empirical evidence about the influence of Debt to Equity Ratio, Return on Asset, Earning per Share, company age, company size, underwriter reputation, and percentage of Public Offering toward underpricing. The independent variables used in this study were the Debt Equity Ratio, Return on Asset, Earning per Share, company age, company size, underwriter reputation, and percentage of Public Offering. The dependent variable used in this study was underpricing which measured with initial abnormal return. This research was carried out in Indonesia Stock Exchange for company in industrial category of services / non-manufacture which released IPO in 2012 until 2016. Sampling was conducted using purposive sampling method which produced 54 companies as research samples. The results showed that the Earning Per Share (EPS) and the company size variables are significantly influenced the underpricing with a negative coefficient. Besides, the Debt to Equity Ratio, Return on Asset, Earning per Share, company age, underwriter reputation, and percentage of Public Offering did not influence significantly toward the underpricing.

Keywords: Underpricing, Debt Equity Ratio, Return on Asset, Earning per Share, Company Age
