DAFTAR TABEL

Tabel 2.1 Efisiensi Teknis .................................................................................................................. 7
Tabel 2.2 Efisiensi Teknis dan Skala ................................................................................................. 8
Tabel 2.3 Input dan Output Rumah Sakit ......................................................................................... 10
Tabel 2.4 Rasio Efisiensi Rumah Sakit ............................................................................................ 11
Tabel 2.5 Standarisasi Rasio Efisiensi dan Peringkat Rumah Sakit ................................................. 11
Tabel 2.6 Kajian Penelitian Terdahulu ............................................................................................ 31
Tabel 3.1 Orthogonal Array (L₉(3⁴)) Faktor Terkendali ................................................................. 37
Tabel 4.1 Identifikasi Faktor dan Level ........................................................................................... 47
Tabel 4.2 Hasil Pengukuran Thickness pada Kondisi Aktual .......................................................... 47
Tabel 4.3 Faktor-faktor Terkendali yang Berpengaruh ................................................................. 50
Tabel 4.4 Identifikasi Faktor Terkendali dan Level ......................................................................... 51
Tabel 4.5 Orthogonal Array Faktor Terkendali ................................................................................ 51
Tabel 4.6 Spesifikasi Alat Ukur ....................................................................................................... 52
Tabel 4.7 Pengukuran Thickness ..................................................................................................... 53
Tabel 4.8 Hasil Pengukuran Thickness pada Kondisi Aktual .......................................................... 54
Tabel 4.9 Pengukuran Nilai Rata-rata dan SNR Taguchi ................................................................. 57
Tabel 4.10 Tabel Respon untuk Nilai Rata-rata Eksperimen.......................................................... 58
Tabel 4.11 Analisis Variansi (mean) Sebelum Pooling Up .............................................................. 61
Tabel 4.12 Analisis Variansi (mean) Setelah Pooling Up ............................................................... 62
Tabel 4.13 Tabel Respon untuk Nilai SNR Eksperimen ................................................................. 63
Tabel 4.14 Analisis Variansi (SNR) Sebelum Pooling Up ............................................................... 66
Tabel 4.15 Analisis Variansi (SNR) Setelah Pooling Up ............................................................... 66
Tabel 4.16 Perbandingan Pengaruh Faktor ..................................................................................... 67
Tabel 4.17 Setting Level Kondisi Optimal ....................................................................................... 67
Tabel 4.18 Hasil Eksperimen Konfirmasi ....................................................................................... 68
Tabel 4.19 Total Kerugian untuk Kondisi Aktual dan Kondisi Optimal .......................................... 69
Tabel 4.20 Perhitungan Nilai A₀ Aktual ......................................................................................... 69
Tabel 4.21 Perhitungan Nilai A₀ Optimal ....................................................................................... 71
Tabel 4.22 Nilai QLF Perusahaan Sebelum dan Setelah Optimasi .................................................. 72
Tabel 5.1 Perbandingan Kondisi Aktual dengan Spesifikasi .......................................................... 73
Tabel 5.2 Setting Level Optimal ..................................................................................................... 75
