LEMBAR PENGESAHAN ........................................................................................................ i
LEMBAR PERNYATAAN ........................................................................................................ ii
KATA PENGANTAR ................................................................................................................ iii
ABSTRAK .......................................................................................................................... v
ABSTRACT .......................................................................................................................... vi
DAFTAR TABEL .................................................................................................................... x
DAFTAR GAMBAR ................................................................................................................ xi
DAFTAR LAMPIRAN ............................................................................................................... xiv

BAB I  PENDAHULUAN ...................................................................................................... 1
  1.1 Latar Belakang Masalah ............................................................................................... 1
  1.2 Rumusan Permasalahan .............................................................................................. 2
  1.3 Maksud Dan Tujuan Perancangan ............................................................................. 3
    1.3.1 Maksud Penelitian ............................................................................................... 3
    1.3.2 Tujuan Perancangan ............................................................................................ 3
  1.4 Sistematika Pembahasan ............................................................................................ 3

BAB II  KAJIAN PUSTAKA ................................................................................................ 4
  2.1 Tanggapan Terhadap Kerangka Acuan Kerja .......................................................... 4
    2.1.1 Dasar Pemikiran .................................................................................................. 4
  2.2 Gambaran Umum Bandar Udara ............................................................................. 4
    2.2.1 Pengertian Bandar Udara .................................................................................... 5
    2.2.2 Fungsi Bandar Udara .......................................................................................... 7
    2.2.3 Penggunaan dan Klasiﬁkasi Bandar Udara ....................................................... 8
    2.2.4 Aktifitas Bandar Udara ...................................................................................... 12
    2.2.5 Tipe Bandar Udara ............................................................................................ 12
    2.2.6 Faktor-Faktor yang Mempengaruhi Perencanaan Bandara .............................. 13
    2.2.7 Karakteristik Pesawat Terbang dalam Perancangan Bandara ......................... 15
    2.2.8 Komponen Utama Bandar Udara ..................................................................... 15
    2.2.9 Konﬁgurasi Bandar Udara ................................................................................ 18
    2.2.10 Fasilitas Pelengkap Bandar Udara .................................................................. 30
    2.2.11 Distribusi Bandar Udara .................................................................................. 32
    2.2.12 Sirkulasi Bandar Udara .................................................................................... 34
2.3 Gambaran Umum Terminal Penumpang Bandar Udara .................................. 35
   2.3.1 Pengertian Terminal Penumpang Bandar Udara ................................. 35
   2.3.2 Karakteristik Umum Terminal Penumpang Bandar Udara ..................... 36
   2.3.2 Penggolongan Terminal Bandar Udara ............................................. 37
   2.3.3 Fasilitas Terminal Bandar Udara .................................................... 38
   2.3.4 Konsep Terminal Penumpang ......................................................... 42
   2.3.5 Standar Bangunan Terminal Bandar Udara ....................................... 48
2.4 Gambaran Umum Alor – NTT .................................................................. 50
   2.4.1 Geografis, Administratif dan Kondisi Fisik ....................................... 50
2.5 Studi Banding ......................................................................................... 51
   2.5.1 Bandara I Gusti Ngurah Rai .............................................................. 51
   2.5.2 Bandara Suvarnabhumi, Bangkok, Thailand ...................................... 59
BAB III DATA & ANALISA ........................................................................ 66
3.1 Aktivitas dan Program Ruang .................................................................. 66
   3.1.1 Pelaku Kegiatan dan Struktur Organisasi ......................................... 66
   3.1.2 Analisa Pola Kegiatan dan Organisasi Ruang .................................... 69
      1. Penumpang ......................................................................................... 69
      2. Maskapai Penerbangan ...................................................................... 71
         A. Staff Front Office Maskapai Penerbangan ....................................... 71
         B. Kantor Dan Administrasi ................................................................. 73
         C. Teknik dan Perbaikan ................................................................. 76
3. Pengelola Bandar Udara (Lembaga) ......................................................... 79
   A. Manager dan Staff Operasional ............................................................. 79
   B. Departemen Perlengkapan Terminal Bandar Udara ............................. 81
   C. Departemen Pemasaran dan iklan Terminal Bandar Udara .. .. 82
   D. Departemen Keamanan Terminal Bandar Udara ................................. 84
   E. Departemen bagian Teknis dan Kebersihan ....................................... 86
4. Retail ....................................................................................................... 87
   A. Retail Bank ......................................................................................... 87
   B. Food Court ....................................................................................... 89
   C. Money Changer .................................................................................. 90
3.1.3 Hubungan Ruang .............................................................................. 91
3.1.4. Program Ruang ............................................................................... 96
3.2 Tapak dan Lingkungan ................................................................. 105
  3.2.1 Data Tapak ........................................................................ 105
  3.2.2 Tapak .................................................................................. 107
  3.2.3 Zoning akhir ................................................................. 124
  3.2.4 Zoning Horizontal .................................................. 125

BAB IV KONSEP .............................................................................. 126
  4.1 Konsep Perencanaan dan Kegiatan .............................................. 126
  4.2 Konsep Dasar ........................................................................... 133
    4.2.1 Konsep Gubahan Massa ............................................... 133
  4.3 Konsep Arsitektural .......................................................... 134
    4.3.1 Konsep Ruang Dalam .................................................. 136
  4.4 Sistem Struktur ................................................................. 138
    A. Sub Structure (Struktur Bawah) ....................................... 138
    B. Struktur Atas ................................................................. 138
    4.4.1 Konsep Sirkulasi Vertikal ........................................... 139
  4.5 Sistem Mekanikal Elektrikal dan Sistem Utilitas ...................... 140
    4.5.1 Sistem Pencegahan Bahaya Kebakaran ....................... 140
    4.5.2 Sistem Penghawaan .................................................. 141
    4.5.3 Sistem Air Bersih, Air Kotor dan Kotoran ................... 141
    4.5.4 Sistem Pencahayaan .................................................. 143
    4.5.5 Sistem Kebakaran ...................................................... 143
    4.5.6 Sistem Tata Udara ..................................................... 145
    4.5.7 Sistem Pengindra Api ................................................ 145

BAB V HASIL PERANCANGAN .................................................... 147
