

ABSTRACT

This application aims to introduce Beijing Institute of Technology campuses to international students. This application is developed to facilitate International Students at Beijing Institute of Technology (BIT) in obtaining information about BIT. The application used the English language for delivery, all about campus activities in BIT, such as how to register, lifestyle, and also point of interest around the Beijing area. The life of international students in Beijing Institute of Technology is the same as studying with international language, but it is not easy to live everyday life in the campus environment, because almost everyone (society, student, and seller) and all transaction activity using Chinese language. How about students who have never learned Chinese before, of course, it's troublesome. Study and life in China without knowing everything about Mandarin (Chinese Language) is a foreign student's concern. A place where people not using Universal Language (English) as their second language is a struggle. Do not know about the campus because all information is written in Hanzi (Chinese Character) is a problem. Most foreigners will use their phone to translate everything in china. This application is developed in Android studio using Java programming language this application has an attractive user interface that makes it easy for users to read. This application is made for campus guidance for international students within friendly user interface and easy to use.

Keyword : Android Studio, Campus Guidance Application, Google Maps, UML, Firebase Database.
