Data collection was done by distributing questionnaires to 140 respondents which then analyzed using Structural Equation Modeling. Based on outer model testing, the research instruments used are valid and reliable with the measurement of convergent validity, discriminant validity, composite reliability, and Cronbach's Alpha. Based on inner model test, the coefficient of determination in this study is buying interest of 57.3% and consumer attitudes of 54.4% with acceptance of hypothesis on the variable of brand awareness and consumer attitudes.
