

ABSTRACT

Every single company which run its bussiness in distribution service should have a lot of outlets and salesmen whose job is distributing the supplies to the customers, buyers or thrid parties as well. Those outlets, foreach, needs an accomodation causing every salesman should make a plan route to cater outlet's accomodation. The scheduled plan route becomes a certain responsibility for every salesman so that all customers, mathematically have enough time to buy or order their needs. For the above reason, this application is urgently required. Besides that all salesman and outlets data can be structurely stored, this program can also maintains that every salesman realy visits the customers or not, even they are missing or absence, it is also detected and tracked. This program also provides the salesmen to display their routes in a map and marker so that they can easily find their destinations easily. Besides, the office staff is enabled to send some messages directly to salesmen while they are outside on duty, the program also enables the office staff to track related salesman and it's displayed in a map and a marker.
