ABSTRACT

Making products that children will use must go through the stage of selecting materials that are suitable and safe for them so that activities that can be done are safe and harmless to their health. There are various kinds of materials that can be selected in making the manufacture of child seat furniture such as sofa bean bag. In addition, in the process of making seats for children who are in the childhood always pay attention to the interesting things he made and want to linger to rest, sit, or play with a chair or sofa bean bag There is also a must applied, because with an attractive design but not supported with ease will make the children easily bored and no longer interested to use the peanut bag.
