

## DAFTAR GAMBAR

| <b>No. Gambar</b> |                                    | <b>Halaman</b> |
|-------------------|------------------------------------|----------------|
| 2.1               | Mesin <i>polishing</i>             | 5              |
| 2.2               | Motor induksi                      | 6              |
| 2.3               | Poros transmisi                    | 7              |
| 2.4               | Poros spindle                      | 7              |
| 2.5               | Poros gandar                       | 8              |
| 2.6               | <i>Pulley</i>                      | 8              |
| 2.7               | Bantalan ( <i>bearing</i> )        | 9              |
| 2.8               | Jenis-jenis sabuk                  | 10             |
| 2.9               | Pompa air <i>aquarium</i>          | 11             |
| 2.10              | <i>Dimmer</i>                      | 11             |
| 2.11              | <i>Inverter</i> motor              | 12             |
| 2.12              | Mikrometer sekrup                  | 16             |
| 2.13              | Dial gauge                         | 17             |
| 2.14              | <i>Tachometer</i>                  | 18             |
| 2.15              | Siku ukur                          | 18             |
| 2.16              | Busur derajat                      | 19             |
| 2.17              | <i>Waterpass</i>                   | 19             |
| 2.18              | <i>Vernier caliper</i>             | 20             |
| 2.19              | Penyiku                            | 22             |
| 2.20              | Pengukuran menggunakan penyiku     | 22             |
| 2.21              | Macam-macam <i>misalignmet</i>     | 25             |
| 2.22              | Ilustrasi <i>run-out</i>           | 26             |
| 2.23              | <i>Run-out</i> pada <i>bearing</i> | 26             |

|      |  |    |
|------|--|----|
| 2.24 | <i>Total run-out</i>                                     | 27 |
| 2.25 | Sirkular <i>run-out</i>                                  | 27 |
| 3.1  | Diagram alir metodologi pelaksanaan                      | 33 |
| 3.2  | Pengukuran ketegaklurusan dengan penggaris siku          | 34 |
| 3.3  | Pengukuran ketegaklurusan dengan busur derajat           | 34 |
| 3.4  | Pengukuran kesejajaran <i>pulley</i>                     | 35 |
| 3.5  | Titik Pengukuran   | 36 |
| 3.6  | Pengukuran <i>alignment pulley</i>                       | 36 |
| 3.5  | Pengukuran <i>run-out</i> poros                          | 37 |
| 3.6  | Titik pengukuran <i>run-out</i> poros                    | 37 |
| 3.7  | Proses <i>polishing</i>                                  | 38 |
| 3.8  | Pengukuran menggunakan <i>tachometer</i>                 | 38 |
| 4.1  | Hasil pengukuran <i>misalignment pulley out-standard</i> | 42 |
| 4.2  | Hasil pengukuran <i>alignment pulley</i> sesuai standar  | 43 |
| 4.3  | Spesimen sebelum proses <i>grinding</i>                  | 44 |
| 4.4  | Hasil <i>grinding</i> V1                                 | 44 |
| 4.5  | Hasil <i>grinding</i> V2                                 | 45 |
| 4.6  | Hasil <i>grinding</i> V3                                 | 45 |
| 4.7  | Hasil pengukuran V1                                      | 46 |
| 4.8  | Hasil pengukuran V2                                      | 46 |
| 4.9  | Hasil pengukuran V3                                      | 47 |
