Abstract

*The issue of rubbish is very busy in past 1 year. There have been several cases that have made this issue hot again, one of them is a sperm whale (*Physetter Macrocephalus*) found in Wakatobi already in carcass. After splitting the stomach, it was found trash that wieghed 6 kg in it's body. Also the condition of the water in Nusa Penida, Bali which has been contaminated with plasic garbage that is displayed by foreign tourist in the video.*

Self awareness of the environment around us is worth investing since we were little,so that our country can develop in a better direction. And also self awareness of marine biota must also be strengthened, so that there no more cases of garbage pollution that occur in the sea as before. And make the marine life environment look more beautiful without garbage.

Starting from a samll thing, that is not littering the environment around us and as much as possible to reduce waste in a number of ways, one way is to use waste to become something valuale and useful.

Keywords : *Issue about garbage*
