

**THE RELATIONSHIP OF CORE SELF EVALUATIONS WITH
BURNOUT AMARY BHAYANGKARA SESPIMMA POLRI HOSPITAL**

ABSTRACT

Santi Ariyanti

The aim of This study is to determine the relationship between Core Self Evaluations on burnout. On Core Self Evaluations as an Independent variable and Burnout as a Dependent variable. The study was conducted to 250 employees of the Bhayangkara Sespimma Polri Hospital who faced an increment to C level of accreditation.

This study uses a quantitative approach with survey methods and data collection techniques using questionnaires that have been adopted from previous research. The data was processed using SPSS application and analyzed with descriptive quantitative.

The result of research analysis that has been done shows that there is a negative relationship between Core Self Evaluation and Burnout conditions in the Employees of Bhayangkara Sespima Polri Hospital with $R = - 0.359$ ($P < 0.005$) which means that if the Level of Core Self Evaluations is high then the level of Burnout is low and otherwise if the level of Burnout is high then the level of Core Self Evaluations is low.

Keywords: *Core Self Evaluation, Burnout*
