

ABSTRACT

This study aims to obtain empirical evidence of the effect of company size, liquidity and profitability on capital structure. The population in this study is the automotive sub-sector manufacturing companies and components listed on the Indonesia stock exchange for the period 2014-2017. The sample selection technique uses purposive sampling and obtained 12 companies equipped with a period of 4 years obtained 48 samples observed. The method of data analysis uses panel data regression. The results showed that the firm size variable had a positive and significant effect on capital structure. While the liquidity and profitability variables have negative and not significant effect on capital structure.

Keywords: Company Size, Liquidity, Profitability, Capital Structure.
