Title	:	Design and Development Damaged EDC Machine Monitoring Applications Using Framework Laravel in PT. Bank Rakyat Indonesia(Persero),Tbk.

Technological change rapidly has a profound effect on the business processes of a banking company. One of them is the EDC machine service. After analyzing the EDC Pro application, many EDC machines are not operating and most of them are damaged, the company does not provide applications to monitor EDC machines that are under repair, therefore, it is important for companies to monitor device performance EDC with a damaged EDC machine web monitoring application for the sake of fluency in business transactions. This can be resolved with the addition of a damaged EDC machine monitoring application based on the web using the Laravel framework, with the main purpose of the application being to monitor the extent to which the damaged EDC machine process was repaired.

Key words: EDC, Web, Laravel.
