Title : The Internship Search Application Using Firebase For Student of Mercu Buana University

internships are educational, training, and learning activities carried out in the business world or in the industrial world that are relevant to student competencies according to their fields while Android is a Linux-based operating system developed by Google. The rapid increase of smartphone usage especially with the Android platform and the need for job vacancy information that is needed by students at the Mercu Buana University, therefore, from these two things, encouraged the author to create an app for job vacancies that can provide students with fast and accurate access to internships. the application was build using firebase API offered by google to facilitate the creation of an android developer application, Firebase is a service provider in the form of a realtime database and backend that could be used on a variety of platforms, using an android smartphone apprentice seekers will be able to see details of the work only by using a smartphone and also registering for the internship just by sending a CV via one touch on the smartphone screen.

Key words: *Android, Internship, Firebase*
