

ABSTRACT

Aplikasi Pemesanan Makanan Berbasis Web Menggunakan PHP dan MySQL

Fahrul Rhamajid

Whats up Cafe is a modern cafe in the Cibubur area. All this time, whats up cafe still uses the manual method and has not been computerized in managing food ordering data, so the process of making order receipts and payment receipts is still very ineffective and efficient and requires a very long time. The author uses descriptive analysis research design, descriptive research method, type of quantitative data, structure of system development using waterfall and system development methodology using output, because in the preparation of this final project the researcher produces a booking receipt and proof of payment receipt.

In the Food Ordering Information System, the author uses the Entity Relationship Diagram (ERD) diagram and Data Flow Diagram (DFD). This Order Food Information System is built using the PHP programming language and the database uses MySQL. After the researchers made this Food Ordering Information system, the authors hoped that the work procedure could be easier for the parties involved in Whats up Cafe Cibubur.

Keywords: *Waterfall, Entity Relationship Diagram, Data Flow Diagram, PHP, Database, MySQL.*
