

HUBUNGAN MEANING MAKING DENGAN GRIEF PADA KEMATIAN ORANG TERDEKAT AKIBAT COVID-19

Dinda Nabila Diyastania

ABSTRAK

Penelitian ini bertujuan untuk mengetahui hubungan antara *Meaning Making* dengan *Grief* pada kematian orang terdekat akibat covid-19. Metode penelitian yang digunakan adalah pendekatan kuantitatif. Penelitian menggunakan 108 responden. Metode sampling yang digunakan adalah *purposive sampling*, dengan rentan usia 18-48 tahun. Alat ukur *Meaning Making* yaitu *MINE* terdiri atas 9 butir pernyataan, alat ukur *Grief* yaitu *Pandemic Grief Scale (PGS)* terdiri atas 5 butir pernyataan. Data diambil dengan menggunakan skala *likert*. Analisa data menggunakan teknik *Pearson Correlation* karena data berdistribusi normal dengan nilai $\text{sig} > 0,05$, yaitu 0,153. Hasil penelitian ini antara *Meaning Making* dengan *Grief* pada kematian orang terdekat akibat covid-19 memiliki nilai koefisien korelasi $r = 0,219$ dengan nilai signifikansi 0,023, sehingga dapat disimpulkan bahwa terdapat hubungan antara *Meaning Making* dengan *Grief* pada kematian orang terdekat akibat covid-19.

Kata kunci: *Meaning Making*, *Grief* kematian orang terdekat akibat covid-19

THE RELATIONSHIP OF MEANING MAKING WITH GRIEF ON THE DEATH OF THE NEXT PERSON DUE TO COVID-19

Dinda Nabila Diyastania

ABSTRACT

This study aims to determine the relationship between the Meaning Making with Grief on the death of the closest person due to covid-19. The research method used is a quantitative approach. The study used 108 respondents. The sampling method used is purposive sampling, with a range of 18-48 years of age. The Means of Making Measuring Tool, namely MINE, consists of 9 items, the Grief measuring instrument, namely the Pandemic Grief Scale (PGS) consists of 5 statement items. Data was taken using a Likert scale. Analysis of the data using the Pearson Correlation technique because the data is normally distributed with a sig value > 0.05 , which is 0.153. The results of this study between the Meaning Making with Grief on the death of the closest person due to Covid-19 have a correlation coefficient value of $r = 0.219$ with a significance value of 0.023, so it can be said that there is a relationship between the Meaning Making and Grief on the death of the closest person due to Covid-19.

Keywords: *Meaning Making, Grief on the death of the closest person due to covid-19*
