

## **ABSTRAC**

Payroll system is a very important function, to provide compensation to employees in the form of salary in lieu of their contributions to the organization / institution. Payroll is one of the processes in sebuah organisasi / agencies that are vulnerable to problems, slow processing of data can lead to slow the presentation of information so that it is possible also in the delays in salary payments. Additionally, if the calculation error will make the information becomes inaccurate. This is what prompted me to make a payroll system aplikasi employees and teachers at High School Jakarta Islamic na'um Siad, because the payroll system is still manual and do not use computerized technology development.
