ABSTRACT

Currently, the ISO 9001:2015 Quality Management System Standard (QMS) has been widely implemented in 170 countries around the world, including in our country. ISO 9001:2015 is used as one of the standard guidelines for controlling the quality management system for products or services. This can be done by improving service and customer satisfaction, through continuous improvement so that the company can survive and develop. The purpose of this study is to analyze customer satisfaction which is influenced by several factors and recommend optimal steps in the process of implementing ISO 9001:2015. The type of this research is descriptive quantitative by distributing questionnaires to active buyers of 50 questionnaires. The analysis in this study used SEM (Structural Equation Model) with the SmartPLS v4 software program. Research locations in the Retail Industry. The results of the study show that there is a positive and significant influence on customer value on customer satisfaction after ISO 9001:2015 is implemented/applied in a company selling industrial equipment, and the Customer Value variable is able to become a mediating variable for Service Quality and optimal ISO implementation with reference to the 7 Principles existing in ISO 9001: 2015 from the results of external audits that have been carried out namely Customer Focus, Leadership, Resources, Process Approach, Continuous Improvement, Decision Making, and Relationship Management
