The rise of the Korean wave phenomenon is the goal of research that is of great interest to citizens of the world today. The entry of culture from Korea includes 4 of the strongest aspects including through K-Pop music, Second through K-Drama, third through cooking and finally through Korean fashion (dress, style, skin care). The development of the times and the impact of globalization can help get sources of information and have a positive impact on society, especially young people using Youtube which is used for those who study, one of which can learn Dance through watching Youtube videos. The S-O-R theory explains that the effect is a special reaction to a special stimulus so that one can spread and estimate the suitability between the message and the communicant's reaction. This type of research uses explanatory quantitative. The paradigm in this study uses the positivist paradigm of the survey method. The sample was selected by purposive sampling where the researcher distributed questionnaires to 63 respondents to Korean Club UKM members at Mercu Buana University, Jakarta. Based on the problem formulation, it was found that Ha was accepted and Ho was rejected, which means that there was an influence of K-Pop Mv shows on YouTube on interest in dance cover for UKM Korean Club at Mercu Buana University, Jakarta. The result of the regression coefficient X is 0.615 which is positive so that it means that the direction of the influence of variable X on Y is positive. The coefficient of determination shows a figure of 15.2% which means that the interest in dance cover from UKM Korean Club Mercu Buana University Jakarta is 15.2%. the remaining 84.8% is influenced by other factors outside of K-Pop Mv shows (variable X).
